

# Mounting of Cots

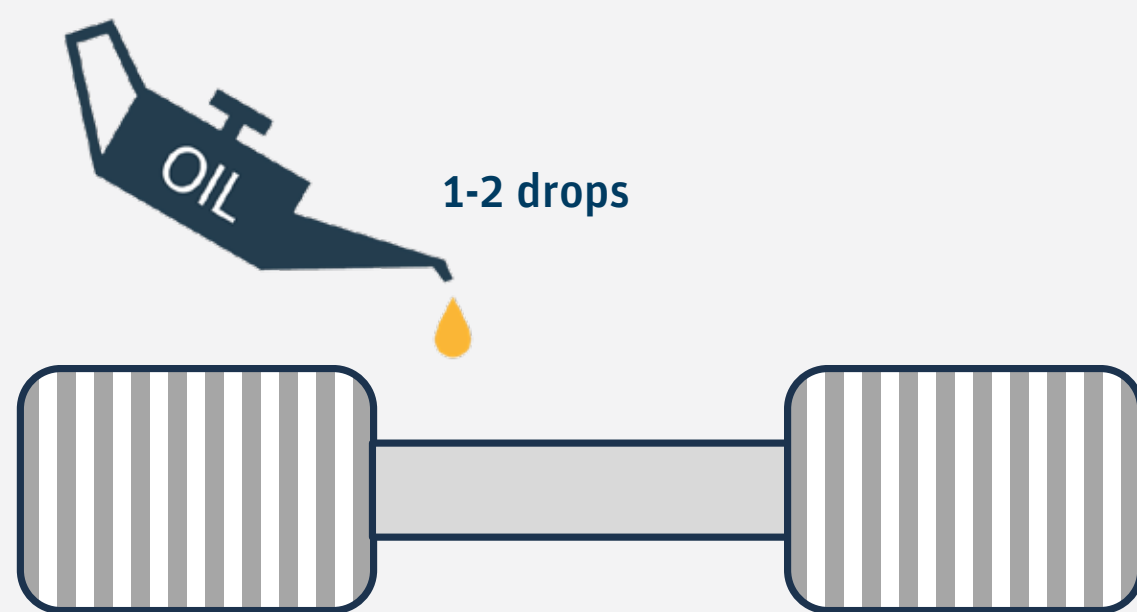

Be sure to mount the cot straight to the arbor.  
All parts on the mounting press must be clean and correctly straight

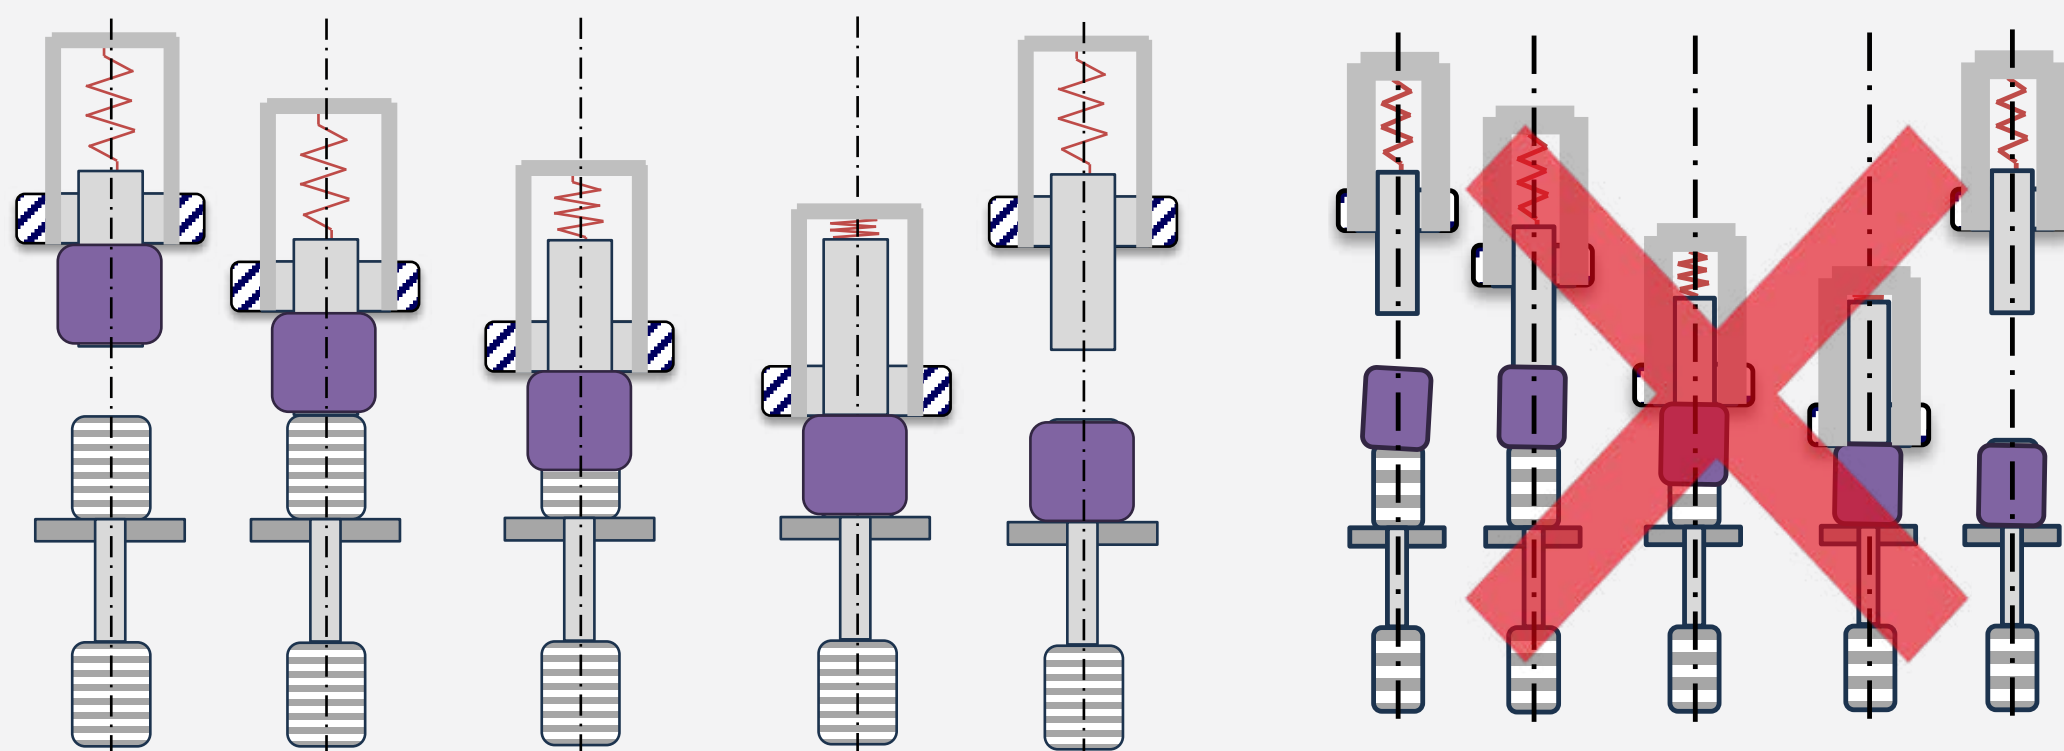

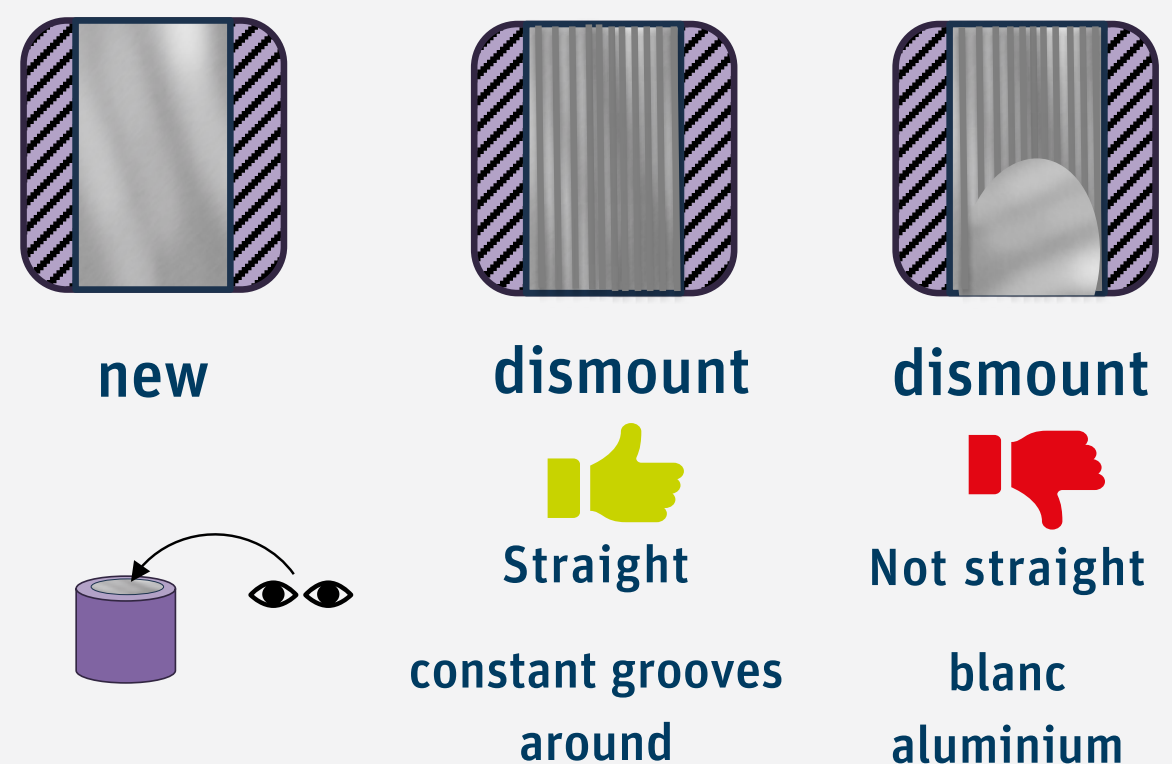

Use the correct plate. The arbour must fit on the plate without wobbling.

If you use older arbors, one drop of machine oil at the arbor before mounting can help to reduce the mounting forces.

Check the correct mounting with dismounting.

Do not place the cot on the arbour and do not hold the cot with your hands while mounting it.  
The cot may only be hold by the centering pin above.
